ROTOBED®

RotoBed®

The RotoBed® is the perfect solution for people who struggle to get in and out of bed. The intuitive remote control requires just a single button press to transition between sleep position and chair position. The RotoBed also has full profiling functions allowing you to adjust the backrest, leg rest and overall bed height.

Once elevated to chair position, the bed rotates perpendicularly towards the room to allow exiting or transfer. You can even set and store your favourite settings for exit height and backrest inclination so that the exit position can be optimised for each individual user.

Our Rotobed Start Package includes

RotoBed® with SafeSleep 4-layer **mattress**

Cotton Sateen **Sheet Set** (incl. main & foot part)

Short Metal **Rails**

Long Metal **Rails**

The RotoBed® is produced in Denmark with a focus on sustainability and long-term reusable materials. The bed's designer (award-winning Scandinavian furniture designer, Hans Sandgren Jakobsen) believes good design contributes to quality of life and he emphasises a focus on innovation, aesthetics and functionality.

His goal is to provide a care bed that positively effects the user's quality of life while at the same time appearing like home-made furniture.

The rotation mechanics of the RotoBed® are pleasantly quiet and the actual rotation action is suitably smooth and comfortable for the user.

The bed is easily and intuitively controlled using the simple handheld remote control.

Individuals are subsequently capable of increased levels of independent mobility which in turn reduces the workload on staff or relatives.

Long Bedrail can be supplied in metal or oak laminate finish.

Support when getting in and out of bed.

Short Metal Bedrail fits head end to provide support with transfers in bed

Lifting Pole with handle. Can be placed either left or right side of bed - fits into built-in holders on bed

Round Table Top made of oak laminate
30cm diameter
Height adjustable and swivels

Minimum bed height of 32cm reduces falls risk

Exit height & position can be **adjusted** to optimally suit each individual

Maximum bed height of 82cm allows carers and relatives to work safely and comfortably
